

NEW KGSP LINEUP - Standard Track Link

We are pleased to announce that the **new KGSP TRACK LINK** is now available for use on various machine models as listed below. The new KGSP TRACK LINK was developed to provide higher reliability and durability to match in strength, hardness, and wear limits for overall optimum wear life in normal jobsite, such as construction, civil, and agriculture. Especially, the diameter of Bushing is increased for 20T Excavators (SK200-8, SK210LC-8, etc.) to prolong the wear life of bushing. It is of course that the KGSP track link is interchangeable with genuine part and provide part warranty as same as KOBELCO Genuine Part with 6 months or **1,000 hrs** which comes earlier.

Part	Description	Application machine model	Genuine P/N	New KGSP P/N
